DETAILED ACTION

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 11 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Sano et al. (US 5694188A).

Sano et al. discloses a liquid crystal electro-optical device comprising:

- a pair of substrates 1/17, at least one of said pair of substrates being transparent;

- a light modulating layer interposed between the pair of substrates, said light modulating layer including a liquid crystal, an optically active substance, and a dichroic dye; and
- applying means 10 (comb-shaped wall electrode) for applying an electric field in a direction parallel with the pair of substrates.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 5559615 A discloses a polymer dispersed liquid crystal display device comprising a cholesteric liquid crystal, which is a guest-host type liquid crystal containing a dichroic dye added to the cholesteric liquid crystal, the dark display becomes dark, thereby increasing the contrast of an image, wherein said polymer dispersed liquid crystal film controls scattering, absorption, and transmission of incident light in accordance with an applied electric field to display an image.

US 5528392 A discloses an optical modulation means having a guest-host liquid crystal modulates the incident light intensity by a change in the light absorbance based on the orientation of the dichroic dye molecules. The light absorbance differs depending on the type of dichroic dye, and it is possible to fabricate a device for enhancing the contrast of the image and a device for suppressing the same by selecting the dichroic dye.

US 4396250 A disclose a multilayer guest host liquid crystal display without polarizers.
